TECHNICAL SKILLS

Languages
Python, C, C++, Java, C#, JavaScript, TypeScript, SQL

Backend & Data
FastAPI, Flask, REST API design, PostgreSQL, Supabase, Firebase, OpenAI & AssemblyAI APIs

Frontend
React, Next.js, HTML5, CSS3, Tailwind, Redux

Infrastructure & Tools
Docker, Git, Linux/Unix, GCP, Vercel, CI/CD, LAN/WAN networking

Foundations
Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, System Design, Secure Coding

CERTIFICATIONS

Outstanding Project Award — Accessible Academic
The Academic College of Tel Aviv–Yaffo · 2026

Network Administrator, Level 6
IDF C4I Corps · 2022

Instructor Diploma
Ministry of Education · 2024

PRESS

> Software engineer completing a **B.Sc. in Computer Science** (expected 2027), who builds and ships systems end to end — from **FastAPI** services and asynchronous data pipelines to **React** front-ends. Comfortable across the stack and close to the metal: **C/C++** for performance-critical work, **Python** for services and automation, **Docker** and Linux for everything in between. Three years of hands-on technical work across network infrastructure and technical instruction. Available for a **full-time backend or full-stack engineering** role.

PROJECTS

Accessible Academic — AI Lecture Platform

2025 – Present

accessible-academic-backend.vercel.app

Python · FastAPI · PostgreSQL · SQLModel · FFmpeg · Vercel · team of 2

- Turns university lecture recordings into captioned video and generated study material — topics, summaries and flashcards — built for students who cannot rely on listening alone.
- Asynchronous **FastAPI** pipeline — FFmpeg normalization → **AssemblyAI** Hebrew speech-to-text with word-level timestamps → LLM generation — so long jobs run in the background and the API stays responsive.
- Built a **grounding validation pass** that re-checks every generated summary and flashcard against the source transcript and rewrites or drops unsupported claims — study material cannot drift into model invention.
- Deployed serverless on Vercel over PostgreSQL, with full **RTL/Hebrew** support including PDF export.
- 🏆 **Outstanding Project Award — 2nd place**, Applications track · Academic College of Tel Aviv–Yaffo, Sep 2026 · Featured in Israel Hayom →

BiteWise — Nutrition Tracking PWA

2026 – Present

bitewise-gray.vercel.app

Next.js · TypeScript · Supabase · Postgres · OpenAI · Tailwind

- Bilingual (Hebrew/English) nutrition-tracking app running in production, with full RTL/LTR layout, Google sign-in and PWA install.
- Live **barcode scanning** (native BarcodeDetector, ZXing fallback) against Open Food Facts, plus AI reading of nutrition labels from photos for products missing from every database.
- Secured every table with per-user **Row Level Security**; AI calls are rate-limited per user and cached in Postgres to keep cost bounded.

RecipeBook — Instagram Recipe Parser

recipe-book-one-psi.vercel.app

Turns Instagram recipe posts into a structured personal cookbook — parses free-text captions into normalized ingredients and steps. Python, Flask, Google OAuth.

Python · Flask · instaloader · Vanilla JS · Google Auth

Study Buddy — Matching App

study-buddy-seven-vert.vercel.app

Matching algorithm pairing students by course, availability and study style. React client with Firebase Authentication and Realtime Database.

React · Firebase · Auth · Realtime DB

EXPERIENCE

Featured in Israel Hayom →
Accessible Academic · 2026

LANGUAGES

Hebrew — Native

English — Full professional

AVAILABILITY

Full-time position

Open to relocation

Programming & Robotics Instructor
2024 – Present

Tactics Education

- Teach **C programming** and embedded development on **Arduino** to student groups, from syntax through pointers and memory management.
- Design project-based curricula and hands-on debugging exercises; review and troubleshoot student code and hardware wiring.

Network Administrator
Aug 2021 – Aug 2022

Israel Defense Forces — C4I (ICT) Corps

- Deployed, maintained and secured **LAN/WAN infrastructure** serving 100+ users.
- Monitored network traffic, resolved OS-level connectivity faults and enforced access-control policy; **cut network downtime by ~25%** through proactive monitoring and faster incident response.

EDUCATION

B.Sc. Computer Science
2023 – 2027 (Final Year)

The Academic College of Tel Aviv–Yaffo

- Relevant coursework: **Data Structures & Algorithms, Operating Systems, Computer Networks, Advanced Programming in C, Object-Oriented Programming (C++), Databases, System Design.**
